Okay...sounds like we'll wait before looping others into this.

Mike

Hi Gayle,

I'm sure CEMM has the capabilities to handle both requests. I agree with Brian though. I look forward to hearing more specifics on the requests.

Thanks,  
Ingrid

Thanks Brian – I should get more information in the coming days on the scope / specific questions they are looking to answer. There is information on data collected thus far on the response website, so that will give some sense of locations / dates: <https://www.epa.gov/oh/air-sampling-data-east-palestine-ohio-train-derailment>

Hi Gayle.

Without knowing what the question is that the data are supposed to answer and not knowing the conditions (dates, locations, etc.) where the data were collected, it's hard to know if a dispersion/deposition/exposure person should be called in to help.

Brian

**Subject:** Potential new ORD support requests for East Palestine

Hi Ingrid, Brian, Mike, and Lara,

During the 3:30 pm call with Shawn Ryan today, two potential new requests may come down the pike later this week. These are noted below – the only action right now is for Brian / Mike / Lara to let me know if anyone other than Ingrid should be looped in.

- 1) ORD may be asked to analyze the data collected thus far – sorbent tubes, canisters, TAGA bus data, met data. I encouraged we first do a triage pass on the data considering the measurement methods / MDLs and any limitations on the data prior to anyone diving into analysis and data interpretation.
- 2) ORD may be asked to do laboratory tests of the handheld PID systems. The scope on this also needs to be determined but I assume the key goal would be to test the responsiveness of the PIDs for n-butyl acrylate.

Ingrid – I suggested you be included to make sure your knowledge is tapped for #1 and to provide testing input on #2.

Thanks for the ongoing help,  
Gayle
